

Setting up a SpeedTouch 536/536i ADSL router via LAN

Before you configure the router, make sure you've connected the router to the computer correctly. The router's Ethernet lamp lights green when the connection between the computer and the router is established.

Your ADSL router's IP address is 192.168.1.254. To access the router, you need to configure the parameters under **Local Area Connection** for the network card connected to the router. Right-click the icon and select **Properties** from the menu. Under **This connection uses following items**, locate the **Internet protocol** and click the **Properties** button. Check the boxes next to **Obtain an IP address automatically** and **Obtain DNS server address automatically**, then click the **OK** button and return to the **Local Area Connection** properties window. Click **OK** to close the window.

If all parameters are correct, open your web browser and in the address bar type <http://192.168.1.254>. When the administration interface opens, click the **SpeedTouch** button in the left side menu.

Under **Pick a task**, select **Set Up**.

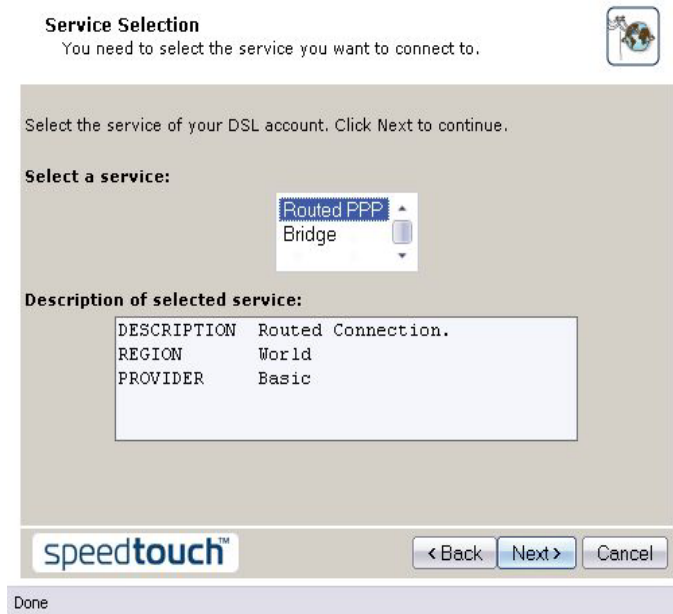

Pick a task...

-  [Set Up](#)
-  [Restart](#)
-  [Return to Factory Default Settings](#)
-  [View event logs](#)
-  [Check connectivity to the Internet](#)

After short loading, *SpeedTouch Easy Setup* welcome screen appears. Click the **Next** button.

Select **Routed PPP** under **Select a service**, then click the **Next** button.

Enter **8.35** in the **VPI/VCI** field, then choose **PPP over Ethernet** as your **Connection Type**.

Routed Internet Connection
Specify the details of the Internet connection. All information should be provided by your ISP.

VPI/VCI: 8.35
Choose a VPI/VCI from the list

Connection Type:
 PPP over ATM (PPPoA)
 PPP over Ethernet (PPPoE)
